

New security on MIT rooftops

Hacker: 'No matter what, people will go on rooftops'

By **Sheila Baber**
NEWS EDITOR

Cameras, card readers, and alarms are among the newest installations on rooftops as part of the campus Roof Access project. John DiFava, chief of police and director of campus services, wrote in an email to *The Tech* that the project began in March and will conclude in October or November. There will be signage installed on the rooftops with new security measures to announce the presence of these measures, according to DiFava.

The MIT Housing Policy maintains that students are prohibited from committing fire and safety violations including "entering or occupying the roof of any residence except in areas designated for, and approved by, MIT for assembly use." DiFava wrote that police and campus services will review requests for roof access on a "case-by-case basis" and asked the community to "protect themselves and others, and avoid unnecessary risks."

It seems unlikely that the newest security installations will prevent those determined to access the roofs from attempting to do so. In the publicly available police logs, there were at least two incidents related to rooftop access in

the past 60 days, one classified as "TRESPASS" resulting in a verbal warning June 8, and another classified as "SUSPICIOUS ACTIVITY" occurring Aug. 23.

In an interview with *The Tech*, a student who wished to remain anonymous due to legal ramifications associated with hacking said that members of the hacking community learned about the impending installation of cameras, card readers, and alarms through floor plans and interactions with facilities workers. "Also, the cameras are really obvious," they added.

The source told *The Tech* that the hacking community as a whole will refrain from modifying or tampering with the security systems, but said that they could not speak for specific individuals.

"We have a big respect for CPs [Campus Police]. We avoid them, and keep a lookout for them. When Sean Collier died, we put collection bins in the dorms asking people to make white cranes. We pulled a hack for him on the anniversary," they said, referring to the cascade of white cranes installed in Stata in memory of the police officer killed in the line of duty in 2013. "We tell people — when they see CPs, to not run — the roof could be wet, and you don't want them to fall. They're just doing their job."

According to the same anonymous

source, members of the hacking community have expressed doubts as to whether the installations will contribute to the safety and well-being of the community.

"There will always be ways around security — they will just be less safe. There's a learning curve to how to move around [safely while hacking]. Hacking is an adventure sport, and as with all adventure sports, the ones who get injured frequently are the beginners and the cocky experienced people," the source said.

There is also skepticism surrounding the intentions behind the security installations. "We've heard that these systems came in place not to stop hacks specifically, but to prevent suicides. These interventions feel fake. They could have measures within dorms, have more walk-in hours, get more therapists at MIT Medical," the source said. "MIT needs to get better at helping people. I've heard that these are some really fancy cameras with sensors. That money could have been spent on mental health and other forms of help."

The source continued, "No matter what, people will go on roofs. There are people who came to MIT for hacking — prefrish have heard stories about the police car and will try to [pull off a hack] no matter what."

Investigation ongoing for gunshots fired near PBE fraternity Tuesday

Gunshots were fired in the vicinity of 400 Memorial Drive, where MIT's Phi Beta Epsilon fraternity is located, during the early morning hours Tuesday.

"No injuries have been reported and there are no known direct threats to the campus," according to an emailed campus advisory issued by Sergeant Andrew Turco on behalf of the MIT Police.

Massachusetts State Police have also been involved in the investigation. Several shell casings were found in the area, explained

a post on the MSP blog, and it was determined that two windows, a tree, and a parked, unoccupied sport utility vehicle were struck by rounds.

As of the Wednesday post, the investigation, including into potential suspects and motive, remains active.

The glass on one of the first floor windows of PBE was visibly broken and cracked, and will likely need to be replaced, according to an article and photo by *The Boston Globe*.

Signage indicates presence of video surveillance in the sub-basement of Building 9, which contains hacking murals.

Bomb threat reported near Hayden Lib., no explosives found by police

There were reports of a bomb threat at 160 Memorial Drive (Building 14) on 9:52 p.m. Aug. 25. According to the community news site *Cambridge Wicked Local*, the call was placed by someone believed to be a man from

California. The MIT Police Logs state that MIT Police worked with Cambridge Police, Cambridge Fire, and State Police to search the building. The police did not find explosives, and the area was cleared.

Office of Communications launches new mit.edu website

Navigation and search redesign primarily aimed at prospective students, as requested by leadership

By **Zoe Anderson**
ASSOCIATE NEWS EDITOR

The MIT Office of Communications launched a new homepage July 25 in an effort to improve navigation and search. "Today's Spotlight," which features a news item or update from MIT, is still the focus, while the landing pages, layout, and color scheme have been redesigned.

The main audience for the redesign is prospective students, as requested by MIT's leadership, Vice President of Communications Nate Nickerson wrote in an email to *The Tech*.

The top two priorities were to "make it easier to find important information and improve search [capability]," based on results from an "intercept" survey which

appears on the homepage after 60 seconds that was conducted over the period of more than a year, Nickerson wrote.

Most of the 50 plus links on the homepage were not being clicked. The search function, which users especially wanted to see improved, was the most-used feature.

The barrage of links on the page made it hard to know where to go for information, current student William Wu '19 told *The Tech* in an interview. Now, there are fewer links, which are more cleanly laid out, making the site easier to use, Wu said.

The new search engine, Elasticsearch, "allows MIT to optimize results based on user analytics and institutional knowledge" and offers auto-search, Nickerson wrote.

The search bar now has its own page. Current student Jessica Tang '19 said in an interview with *The Tech* that this is a trend she has seen, but that she finds it a little odd that its auto-suggest has "see more results" and "view all" options, as opposed to filling up more space on its page.

Wu said that the "Highly searched" and "Recommended today" lists shown on the homepage introduce users to content that they would not have thought to search. Tang said that this would be especially helpful to site visitors who are new to MIT and not sure where to start.

In the "intercept" survey, many respondents criticized the visual design of the old homepage, espe-

WEATHER

A brief respite from the heat

By **Jordan Benjamin**
STAFF METEOROLOGIST

On Tuesday night, Boston recorded its 2nd warmest low temperature on record — 81 °F (27 °C), but relief is coming. Thursday begins a brief cooldown from the oppressive, dangerous heat of the past couple days. As a cold front surges through the region, isolated thunderstorms could form during the afternoon before temperatures drop significantly overnight. On Friday, temperatures will struggle to rise out of the low 70s °F as much less humid and more comfortable

air overspreads the Northeast. The respite will be short-lived, however, as high heat and humidity will return by Sunday and likely last well into next week. These waves of excessive heat are driven by high pressure building over the Western Atlantic ocean and Eastern U.S. — a pattern that shows no signs of breaking anytime soon. Elsewhere, the quiet tropical Atlantic could begin to pick up over the next week as conditions become favorable for tropical waves moving off of Africa. Hopefully, we can avoid a repeat of last year’s disastrous hurricane season.

Extended Forecast

Today: Partly Cloudy. A Chance of thunderstorms in the afternoon. High around 88°F (31°C). Winds NW at 5-10 mph.
Tonight: Partly Cloudy. Low around 67°F (19°C). Winds NE at around 10 mph.
Tomorrow: Partly Cloudy. High around 73°F (23°C). Low around 65°F (18°C). Winds NE at around 10 mph.
Saturday: Mostly Sunny. High around 75 °F (24°C). Low around 68°F (20°C).
Sunday: Mostly Sunny. High around 85°F (29°C).

John McCain, war hero, senator, presidential contender, dies at 81

By **Robert McFadden**
THE NEW YORK TIMES

John S. McCain, the proud naval aviator who climbed from depths of despair as a prisoner of war in Vietnam to pinnacles of power as a Republican congressman and senator from Arizona and a two-time contender for the presidency, died Saturday at his home in Arizona. He was 81.
According to a statement from his office, McCain died at 4:28 p.m. local time. He had suffered from a malignant brain tumor, called a glioblastoma, for which he had been treated periodically with radiation and chemotherapy since its discovery in 2017.
Despite his grave condition, he soon made a dramatic appearance in the Senate to cast a thumbs-

down vote against his party’s drive to repeal the Affordable Care Act. But while he was unable to be in the Senate for a vote on the Republican tax bill in December, his endorsement was crucial, though not decisive, in the Trump administration’s lone legislative triumph of the year.
A son and grandson of four-star admirals who were his larger-than-life heroes, McCain carried his renowned name into battle and into political fights for more than a half-century. It was an odyssey driven by raw ambition, the conservative instincts of a shrewd military man, a rebelliousness evident since childhood and a temper that sometimes bordered on explosiveness.
Nowhere were those traits more manifest than in Vietnam, where he was stripped of all but his character. He boiled over in foul curses at

his captors. Because his father was the commander of all U.S. forces in the Pacific during most of his 5 1/2 years of captivity, McCain, a Navy lieutenant commander, became the most famous prisoner of the war, a victim of horrendous torture and a tool of enemy propagandists.
His mother, Roberta McCain, Navy all the way, inspired his political career. After retiring from the Navy and settling in Arizona, he won two terms in the House of Representatives, from 1983 to 1987, and six in the Senate. He was a Reagan Republican to start with, but later moved right or left, a maverick who defied his party’s leaders and compromised with Democrats.
He lost the 2000 Republican presidential nomination to George W. Bush, who won the White House.
In 2008, against the backdrop

of a growing financial crisis, McCain made the most daring move of his political career, seeking the presidency against the first major-party African-American nominee, Barack Obama. With national name recognition, a record for campaign finance reform and a reputation for candor McCain won a series of primary elections and captured the Republican nomination.
But his selection of Gov. Sarah Palin of Alaska as his running mate, although meant to be seen as a bold, unconventional move in keeping with his maverick’s reputation, proved a severe handicap.
At some McCain rallies, vitriolic crowds disparaged black people and Muslims, and when a woman said she did not trust Obama because “he’s an Arab,” McCain, in one of the most lauded moments

of his campaign, replied: “No, ma’am. He’s a decent family man, a citizen that I just happen to have disagreements with on fundamental issues.”
On Election Day, McCain lost most of the battleground states and some that were traditionally Republican. Obama won with 53 percent of the popular vote to McCain’s 46 percent, and 365 Electoral College votes to McCain’s 173.
With the rise of Donald Trump, the Republican flame thrower who steered U.S. politics sharply to the right after his election in 2016 as the nation’s 45th president, McCain was one of the few powerful Republican voices in Congress to push back against Trump’s often harsh, provocative statements and Twitter posts and his tide of changes.

Color choices described as ‘ugly,’ ‘weird’ on website launch day were quickly modified

Homepage, from Page 1

cially prospective undergraduate and graduate students. Respondents said it should be more “modern” and “professional,” according to Nickerson. Another common suggestion was to make it more mobile-friendly.
Only about five percent of users are located in Cambridge, but these users account for about 23 percent of all site visits in the past year. The team is working to meet the needs of both “the power-using 5 percent here on campus and the other 95 percent who have little or no familiarity with us,” Nickerson wrote. Tang

said that right now, the site does feel optimized for the latter group.
MIT cares that its current students “have the digital resources they need,” Nickerson wrote, listing the new Office of the Registrar’s site (which consolidates over a dozen sites) and the upcoming redesigns of the Admissions and Student Financial Services sites as examples. Nickerson wrote that the redesign team will work to improve it going forward as they receive feedback.
Current students make up one percent of “intercept” survey respondents. “I suspect it’s because a) they are too busy to respond to many surveys [and] b) they are power users

who generally use Google to deep link into the MIT ecosystem, rather than using the front door/home page,” Nickerson wrote.
Prospective students, who are the main audience, make up 53 percent of respondents to the “intercept” survey.
Prospective students prefer the new site, Nickerson wrote. The new site has also created an increase in referral traffic to the School of Engineering’s various sites with admissions and academic information. The search bar has seen a 74 percent increase in use.
Tang said that she liked that the layout has more space — even

though some might call this “wasted real-estate,” Tang said this style is less intimidating than large chunks of text. She also said that she thought the site seems to have quite a lot of hidden links, and she was particularly surprised by how hidden the links for donations and the Better World initiative are.
Nickerson wrote that about 10 people told the Office of Communications on the launch day that the color choices were “ugly” or “weird,” leading the office to quickly tone it down. The initial color contrasts did not follow design visibility standards, Tang said. Now, the color scheme is “modern, fresh, and

uplifting,” Wu said. Wu said that the links pop out more than they did on the old site because of the link-background saturation contrast.
The Office of Communications collaborated with the Admissions Office and brought in the creative agencies Blue State Digital and Upstatement to work on the redesign. Blue State Digital conducted preliminary research two years ago. Upstatement did the redesign, with input from prospective students through collaboration with Admissions and with input on life at MIT from current students through three pop-up workshops in Lobby 10.

Fall 2018 Class Offering MIT 3.087, EC.S13

Materials, Societal Impact, & Social Innovation

OPEN TO MIT UNDERGRADUATE & GRADUATE STUDENTS

12 Units / MWF 12 noon – 1pm; Register Online: Limited to 15 students

We stand at a pivotal moment in time for science, technology, society, and our planet. There is an imperative to pursue intentional research which “fosters respect for life and human dignity, equal rights and social justice, cultural and social diversity, sustainability, and a sense of human solidarity and shared responsibility for our common future” (UNESCO, 2015). Students will study the societal and humanistic context of frontier materials research through team-based research projects, in particular students will be provided with frameworks for how to apply frontier materials research to positive social impact. The broader context and interplay of materials science and engineering with regards to societal factors, i.e. equity, geopolitics, economies, history, and ethics, will be discussed. Example topics include, within a materials science and engineering context: historical change, social problems and movements, social innovation, and entrepreneurship, equity-based design thinking, sociology of science, social science research methods, thinking across geographies using visual narratives, bias in scientific and technological research, sustainability as social justice, creative futures and consequences, and interdisciplinary theory and practice. Examples of projects include: economics of enabling biomaterials, low cost, paper-based molecular diagnostics, environmental impact of 3D printed materials, bio-inspired composite materials design, social impact of multifunctional textile fibers, nanostructured concrete and more. Voting in the Democratic Primary? The MIT Dems endorse these candidates

Primary elections are set to take place in Massachusetts on Tuesday, September 4th. These are pivotal elections, taking place at an important time in our country and in our state. How we vote in September and November will affect issues that directly impact the student population, such as housing policy and transportation reform. But who in Massachusetts isn't impacted in some way by the housing market or by the effects of a less-than-thriving public transit system? These are only a few of many social policy issues that loom large for all Massachusetts residents. In the primary elections, we vote on which candidates from each party will end up on the general election ballots in November.

**U.S. House of Representatives, MA-7:
Ayanna Pressley**

We feel that her years of experience as a senior aide and political director for Representative (and then Senator) Joseph Kennedy II and later John Kerry give her a familiarity with the Washington political process that will aid her in her role as Representative. We feel that she has demonstrated her political capabilities well in her position as city councilor. We believe that she will represent MA-7 successfully and prioritize many issues that are important to

Lieutenant Governor: Quentin Palfrey
We endorse Quentin Palfrey for Lieutenant Governor. Palfrey is a dedicated civil servant with years of government service under his belt and a track record of strong leadership on the issues that matter most to progressives in Massachusetts.

Middlesex County DA: Donna Patalano

We endorse Donna Patalano for Middlesex County District Attorney. The criminal justice system unfairly favors the wealthy and privileged, and inequalities persist in how the law is enforced. The district attorney's office has great power to bring fairness and transparency to law enforcement, and Donna Patalano has demonstrated her commitment to making change. She understands racial disparities in sentencing, the failure of mass incarceration, and how cash bail disproportionately hurts the working class. She has also made a commitment to increase transparency in the District Attorney's office, including thorough data collection and publication. For her consistent support of criminal justice reform and reducing social and economic injustice in law enforcement, MIT Democrats is proud to support Donna Patalano.

We endorse Josh Zakim for Secretary of State because his platform on voting rights would make it easier to vote in Massachusetts, particularly for students, whose voices are underrepresented in state and local politics. Zakim had supported and fought for automatic voter registration at the state level for years before it passed the state legislature this spring. He also supports election-day voter registration, early voting, weekend election days, absentee voting with no need for a legal excuse, and ranked choice voting. This is in contrast to his opponent, who has defended in court the 20-day registration deadline that makes it difficult for students to organize and vote in Massachusetts elections — particularly in primary elections, where the voter registration deadline falls before students arrive on campus.

We hope that these endorsements are helpful and informative for members of the MIT community and surrounding areas. For more information, including to check your own voting registration status, and a guide to all the Democratic primary candidates, please visit vote2018.mit.edu and democrats.mit.edu.

Ahmed Elbashir is a Sophomore in EECS and a member of MIT Democrats.

Editorials are the official opinion of *The Tech*. They are written by the Editorial Board, which consists of Chairman Charlie Moore, Editor in Chief Emma Bingham, Executive Editor Patrick Wahl, Contributing Editor Vivian Zhong, and Opinion Editors Steven Truong and Fiona Chen.

Letters to the editor, columns, and editorial cartoons are written by individuals and represent the opinion of the author, not necessarily that of the newspaper. Electronic submissions are encouraged and should be sent to letters@tech.mit.edu. Hard copy submissions should be addressed to *The Tech*, P.O.
